

Drug Taking Students in Fanling

2C Lam Kwan Lok, Wilson

In Sheung Shui and Fanling, there are drug takers in secondary schools. In the newspaper, I can see some news about students taking drugs in Fanling. Two students were found taking drugs at Band 3 schools during lessons. They bought the drugs in Ching Ho Estate. After reading that news, I think that those students are very silly. They knew that drug might make them sick and affect their health, but they still took it.

I think the Form two students take drugs because their friends influence them. It may be their friends who introduce drugs to them. So the students believe that taking drugs is good and it will bring them happiness and excitement.

Drugs may affect students' social life and health. Their bladders will become smaller in size. As a result, they cannot dine out because they need to go to toilets all the time. It also affects their social life. Also, the school's image will be affected. Students will spend a lot of money on buying drugs. They may do anything in order to get the money. In this way, juvenile delinquency may rise.

It is high time that the government did something to stop this situation. They should hold some talks and produce some videos to educate the public about this issue. I hope that, one day, Hong Kong can become a 'drug-free' city.
